

NISHA SALEHITTAL

Product Engineer

Bangalore, India | nishavsalehittal572@gmail.com | 08431442813 | linkedin.com/in/nisha-salehittal-b936b1302 | GitHub: add-your-link

PROFILE

B.Tech graduate (Computer Science) who builds and ships web features end-to-end — frontend UI, backend logic, and data — with a strong quality-first mindset from hands-on QA experience. Comfortable across Java, JavaScript, and SQL, with a track record of finding, understanding, and fixing what breaks in real products. Looking to bring that builder-plus-quality perspective to a Product Engineer role.

PROFESSIONAL EXPERIENCE

Technical Support Engineer – Vedantu Innovation Technology Feb 2026 – Present

- Resolved application and system issues for users via email and ticketing systems, maintaining SLA compliance on every ticket.
- Diagnosed and fixed DNS, VPN, and network connectivity issues, reducing average downtime for affected users.
- Maintained clear, structured documentation of recurring issues, helping cut resolution time for repeat cases.

App Testing Intern – Expose Trendze Jul 2025 – Jan 2026

- Designed and executed test cases for mobile applications, covering functional, regression, and exploratory testing.
- Wrote SQL queries to validate backend data and catch discrepancies before release, improving defect turnaround time.
- Logged defects with clear reproduction steps and worked directly with developers to resolve them, sharpening an eye for edge cases that now carries into how you build features.

PROJECTS

Tech-Gram — Accessibility-focused Communication App 2025

- Built core interaction features for a communication app aimed at improving accessibility for rural communities, from concept to working UI.
- Developed frontend components in HTML, CSS, and JavaScript, then ran manual and regression testing to ensure stability across devices.
- Add: your specific role, team size, and any measurable outcome (e.g. number of users, features shipped).

On-Road Vehicle Breakdown Assistance — Roadside Assistance Platform 2025

- Built the web UI for a roadside assistance platform connecting stranded drivers to help.
- Performed functional, UI, and SQL database testing across the platform to validate end-to-end workflows and catch defects before launch.
- Add: what backend/data logic you personally built (not just tested), if any — this is the single highest-impact edit for a Product Engineer resume.

TECHNICAL SKILLS

Programming & Web: Java, C, C++, JavaScript, HTML, CSS, SQL, basic Linux shell scripting

Tools & Practices: Git/GitHub, GitHub Actions, Postman, Jira, JMeter, Selenium, SDLC, STLC, Agile

Testing (added strength): Manual, regression, API, and automation testing across SaaS platforms

EDUCATION

Bachelor of Technology, Computer Science and Engineering 2021 – 2025

Presidency University

CERTIFICATIONS

Java Full Stack Development — JS Spiders 2025

Core Java, Advanced Java, SQL, HTML, CSS, JavaScript, and web application development.
